

# FAMILY EXPENSES

**Team Id: NM2025TMID20236**

**Team Members: 3**

**Team Leader:** LOGESH R

**Member 1:** SRIRAM T

**Member 2:** VIGNESH E

**Problem Statement:** The project aims to develop a comprehensive expense calculation system using ServiceNow. This system will enable users to track and manage family expenses efficiently. It will include features such as expense categorization, budget setting, real-time tracking, and reporting capabilities. Utilizing ServiceNow's robust platform, the project will ensure seamless integration, user-friendly interface, and scalability to accommodate varying family sizes and financial complexities. The end goal is to empower users with the tools they need to make informed financial decisions and promote financial well-being within the family unit.

**Objective:** The "family expensive project" phrase seems to be a misunderstanding, but if referring to ServiceNow's Strategic Portfolio Management (SPM), also known as Project Portfolio Management (PPM), its objective is to strategically manage and optimize a portfolio of projects by aligning them with business goals, providing real-time visibility into performance, and improving agility and resource allocation to deliver maximum customer value.

**Skills:** Service now Family expenses IOT Open Hardware platforms, Data Structures

## TASK INITIATION

**Milestone 1:** update set

## Activity 1: Local update set

1. Open service now
2. Click on All >> search for Local update
3. Click on new
4. Name: Family Expenses
5. Then click on submit and make current.

## Milestone 2: CREATION OF TABLE

### Activity 1: TABLE

1. Open service now.
2. Click on All >> search for Table
3. Click on new.
4. Label: Family Expenses, Name: Auto-Populated,  
New menu name: Family Expenditure.
5. Go to the Header and right click there>> click on Save.

✕ ✎	Number	String				false
✕ ✎	Date	Date				false
✕ ✎	Amount	Integer				false

## Activity 2: Creation of Columns (Fields)

1. Near Columns Double click near insert a new row.
2. Give the details as:  
 Column label: Number  
 Type: String
3. Double click on insert a new row again
4. Give the details as:  
 Column label: Date  
 Type: Date
5. Double click on insert a new row again
6. Give the details as:  
 Column label: Amount  
 Type: Integer
7. Double click on insert a new row again
8. Give the details as:  
 Column label: Expense Details  
 Type: String  
 Max length: 800

**Conclusion:** A successful ServiceNow "family" (project or platform) implementation, even a costly one, is concluded by demonstrating tangible business value through strategic alignment, improved operational efficiency, and positive user satisfaction. Achieving these outcomes requires senior expertise, comprehensive process mapping, a strong focus on configuration over customization, and ongoing transparent communication to manage risks, ensuring the project delivers its intended benefits and a positive return on investment.
